Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Maximum Marks: 2 Marks

Customer Problem Statement Template

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Problem Statement (PS)

PS-1

I am (Customer):
A member of the IT procurement team.

I'm trying to:
Process Standard Laptop requests efficiently and ensure that the required configuration task is created and assigned to the Hardware team after approval.

But:
The configuration task currently requires manual intervention, which can result in delays and additional administrative work.

Because:
The existing procurement process does not automatically create and assign the configuration task after the Standard Laptop request is approved.

Which makes me feel:
Frustrated because the process can take additional time and may increase the workload of the IT procurement team.

Problem Statement (PS)

PS-2

I am (Customer):
An employee who has requested a Standard Laptop.

I'm trying to:
Receive my laptop as quickly as possible after submitting and getting approval for the request.

But:
The laptop configuration process may be delayed if the configuration task is not created and assigned promptly.

Because:
Manual task creation and assignment can introduce additional processing time after the request is approved.

Which makes me feel:
Frustrated because I have to wait longer to receive a properly configured laptop.

Final Problem Statement

The IT procurement process for Standard Laptop orders requires improvement because configuration tasks may involve manual creation and assignment after approval. This can cause delays, increase administrative effort, and affect the time taken to provide the laptop to the user. Therefore, an automated process is required to create the configuration task and assign it to the Hardware team efficiently.
